Minutes

Summary

- Set up the 10 minute meeting

  - Talk about what you've done, but more on what you're planning on doing.

- GitHub tasks

  - If not planned in a weekly planning meeting, only added when absolutely necessary because of a problem.

  - Document your daily work on your GitHub task(s) in a comment. Format it so that we can easily scrape the problems you ran into, your hours, and a one-sentence summary for a status report.

- Cycle 1 Planning

  - At the end of cycle 1, we want a working prototype of the camera module that lands on a landing station of some kind. We need the following:

    - A **landing station** of some kind; doesn't necessarily have to be the final design

    - A triangulation **algorithm** to make the landing station and module talk

    - Some way to **interface** the APM chip to the module for guidance "switch over"
